1. Claims 1, 5, 15, 17-24 and 29-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ilda et al. (2003/0118790) taken alone or in view of applicants' admissions concerning the state of the art, for reasons of record and for reasons given below. With respect to the amendment to claim 1, in light of the specification, the phrase "substantially comprising" is interpreted to mean "comprising." With respect to the amendment to claim 5, MPEP2111.03 states:

For the purposes of searching for and applying prior art under 35 U.S.C. 102 and 103, absent a clear indication in the specification or claims of what the basic and novel characteristics actually are, "consisting essentially of" will be construed as equivalent to "comprising." See, e.g., PPG, 156 F.3d at 1355, 48 USPQ2d at 1355.

In this case, the scope of applicants' disclosure is broad so the phrase "consisting essentially of" must be construed as "comprising."

The reference discloses polyester filled with inorganic particles at [0074-0076]. With respect to silica, the reference states "silica having various pore capacities." This would suggest to one of ordinary skill in the art the use of porous particles. With respect to new claim 31, the reference discloses non-voided polymeric backing at [0090-0091].

2. Applicant's arguments filed March 21, 2006 have been fully considered but they are not persuasive. That polyethylene terephthalate is not the most preferred material of the reference and is not in the examples is not persuasive in overcoming the rejection since it is clearly disclosed as an alternative material. The amendments to the claims

do not exclude the presence of hydrophilic binder. Plasma treatment is also clearly disclosed by the reference.

With respect to applicants' showings concerning dot spread and print density, these arguments are not persuasive because they are not commensurate in scope with the claims. The claims are much broader than the showings because of the use of open claim language. The showings could be persuasive for claims that were properly limited. It is not persuasive that applicants' invention does not require hydrophilic polymer because applicants' claims do not preclude hydrophilic binder from being present.

3. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
